KALEB KING

Business Analyst

PROFILE

I have over a decade of experience in the world of accounting with an emphasis on accounts receivable and sales tax. During that time, I have discovered my passion for data. I have an endless drive to break down a complex topic into its components, understand how they interact with each other, and communicate it in an effective way to stakeholders at all levels of an organization. I've written countless queries, ETL pipelines, dashboards, and markdown documents. I'm always looking for new ways to make sense of the world using data.
